-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

1. The drawings are objected to because improper shading in Figures 1 and 2 makes several details illustrated therein indecipherable. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities:
- a. At page 1, line 23, "show" apparently should read --shown--.
 - b. At page 3, line 18, "type" apparently should read --types--.

Art Unit: 3736

- c. At page 12, line 25, "24" apparently should read --22--.
- d. At page 12, line 29, "24" apparently should read --22--.
- e. At page 12, line 32, "24" apparently should read --22--.
- f. At page 12, line 35, "24" apparently should read --22--.

Appropriate correction is required.

- 3. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

- 4. Claim 1 is objected to because of the following informalities: in line 1, "the" apparently should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 102

- 5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

- 6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by McGorry et al. ('610). McGorry et al. teach an apparatus for measuring movements of a patient's spine. The apparatus includes a vertical member (28) having a plurality of sensors mounted thereto. A first sensor

Art Unit: 3736

(30) is capable of monitoring flexion and extension motions of the spine in the midsagittal plane.

A second sensor (32) is capable of monitoring lateral motions of the spine in the frontal plane.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Marras et al. ('088) and Spielman ('697) teach an apparatus for monitoring the motion components of the spine. Brunner ('201) teaches a device for measuring the mobility of the back or trunk of a patient. Jain et al. ('800) teach a device for measuring lumbar spinal movement. Sawhill ('929) teaches a lumbar spine motion sensor. Moore et al. ('758) teach a spine motion analyzer.
